

## SMART MAX BIO

Filter with quick-release cartridges for hard and ultra-hard water, protecting against scale for 6 times longer

## MAX

Classic filter for continuous softening of water with a high content of hardness salts

## ECO MAX

Three-stage softening filter in the form of a monoblock; when the resource is exhausted, the entire filter is replaced

## TECHNOLOGIES USED

### ARAGON MAX

**ANTI-SCALE PROTECTION 6 TIMES LONGER COMPARED TO OTHER HARD WATER FILTERS**

Conventional softening filters remove hardness salts completely and quickly exhaust the ion exchange resource. MAX series filters reduce excess hardness to an optimal level sufficient to prevent scale formation. They soften water continuously for 12 months without need to replace or regenerate cartridges. At the same time, the water maintains a balanced composition of minerals.

## SMART BIO

Filter with quick-release cartridges for soft water, enriches purified water with useful microelements

## BIO

A series of classic filters for all types of water – soft, hard, super-hard and ferrous

## ECO BIO

Filter for soft water in the form of a monoblock; when the resource is exhausted, the entire filter is replaced

### ARAGON BIO

**100% PROTECTION FROM VIRUSES WITHOUT MEMBRANE TECHNOLOGIES, BIOCIDAL ADDITIVES AND UV**

Water after purification with BIO series filters can be drunk without boiling. Numerous studies, including international ones, have confirmed the removal of rotaviruses, noroviruses, adenoviruses, astroviruses, coronavirus, hepatitis A virus and other pathogens. An additional benefit is the recrystallization of hardness salts from calcite form into useful aragonite form. Unlike calcite, aragonite does not form scale when boiled and is easily digestible.

Confirmed

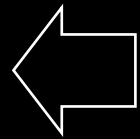

# ALLIANCE OF TECHNOLOGIES

## BIO + MAX

in SMART MAX BIO  
for hard water

ARAGON BIO

**100%  
PROTECTION**  
AGAINST VIRUSES  
AND BACTERIA

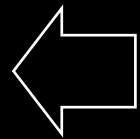

ARAGON MAX

**6 TIMES  
LONGER**  
ANTI-SCALE  
PROTECTION

## BIO + BASCON

in SMART BIO  
for soft water

Passing through the Bascon cartridge, purified water is saturated with useful minerals - calcium, magnesium and potassium.

Microelements are in dissolved form and are completely absorbed by human organism.

Due to the shift of redox potential to the alkaline side (redox potential 70-90 mV), purified water tones the body, activates cell restoration, and improves metabolism.

# DISTINCTIVE FEATURES OF THE ARAGON CARTRIDGE

## VERSATILITY

ARAGON alone removes insoluble impurities, hardness salts, heavy metals, chlorine, organics and other contaminants, eliminates foreign odors and tastes.

## ANTI-DISCHARGE

Thanks to the intricate structure (in the form of a labyrinth) and funnel-shaped pores, contaminants are retained in the ARAGON cartridge forever.

## SELF-INDICATION

By sharply reducing the pressure, ARAGON itself will indicate the need for replacement.

## IMPREGNATED SILVER

The cartridges contain silver in a safe form. The bacteriostatic effect prevents the proliferation of filtered microorganisms.

## LOW PRESSURE OPERATION

Low pressure in line will not interfere with effective cleaning; you will not have to purchase a pump.
